

How Come You Lost Faith in the Bible

Introduction

Christians around the world today are being challenged by Science's research that repeatedly tell us that the Bible is wrong and what Science is now reporting is correct. This article explodes that statement and demonstrates that in fact the Bible is more correct in its account of past events than what Science is telling us.

Genesis in particular is uncannily accurate with respect to the formation of the universe and planet Earth, the DNA chains of the different kinds of water creatures, birds, animals and humans plus many more previously scoffed at facts. Recent discoveries now totally support that Noah's Flood was more than just feasible with the discovery of vast mega volumes of water under the Earth's surface of such proportions that it would be more than enough to flood the entire world.

The article asks the question: Why would we lose faith in the Bible when in fact it is all proving to be true?
